SWITCHING M.2 STORAGE MODE ON EZPRO MOTHERBOARD

(TYPE 1-161, H81)

Dear User,

We would like to inform you about a new feature on the EZPRO TYPE H61, H81 MOTHERBOARD, which allows switching the storage mode between M.2 SATA and M.2 NVME. This can be done by using the lever switch located on the motherboard unit.

Here are the steps to switch the storage mode:

1. Ensure that the computer is fully powered off.
2. Locate the storage mode switch lever on the motherboard.
3. Carefully slide the switch lever to the desired position using your finger.
4. Restart the computer after completing the adjustment.

These changes are designed to provide additional flexibility in managing storage performance according to your preferences, whether for increased speed, capacity, or other considerations.
